TECH-TIPS

Title: MM11-U/UP MEMORIES FAILING HIGH CURRENT MARGINS

Tech Tip Number: MJ11 TT-2

Processor Applicability: All 11/70

Author: Jim Holderby Rev: g

Approval: Lee Mickle Date: 9-13-76

Cross Reference: MM11-TT-15

This Tech Tip is issued for cross reference purposes only.

Title: INTERMITTENT PARITY ERRORS AND/OR SYSTEM SOFTWARE FAILURES

Tech Tip Number: MJ11 TT-3

Processor Applicability: All 11/70

Author: Jim Holderby Rev: g

Approval: Lee Mickle Date: 9-15-76

Cross Reference:

Intermittent parity errors and/or system software failures have been caused by the H873 memory bus terminator (in M8149 Rev. "A" board only) not seated in connector properly. ECO M8149-0004 corrects this problem. Therefore, if any of these systems occur and the M8149 module is an etch Rev. "A", install ECO M8149-0004 or swap this Rev. "A" module for a Rev. "C" module.

A quick check for this ECO is to see if the H873 terminator is secured to the M8149 by nylon screws.

Title: MEMORY BUS CABLING

Title QUALADYNE 1540 SENSE AMPS		Tech Tip Number MM11 01
Processor Applicability: All	Author DON ZERESKI Rev A Approval CHUCK DEWEY Date 6/27/72	Cross Reference

The Qualadyne 1540 sense amps have had bonding problems. The unit is used in most current DEC sense amplifier boards. The Motorola 1540 should be used as its replacement when necessary. Most of the defective units have been replaced during production. These were used in MM11-E and F memories.

Since the Motorola 1540 units are in short supply, Production is only replacing failing units and are not retrofitting all boards in all product lines. Machines in the field that exhibit strange memory problems that can be localized to sense amp problems should be checked for Qualadyne units with the following date codes: 7014 7016, 7020, 7022, 7024, 7031, and 7032. These units may be defective and should be repl. ed as a last resort We are not suggesting a purge of all Qualadyne units of the above mentioned date codes or future Qualadyne units.

Title H207E MEMORY STACK		Tech Tip Number MM11 02
Processor Applicability: All	Author TOM KARPOWSKI Rev A Approval CHUCK DEWEY Date 6/27/72	Cross Reference

The MM11-E memory will be using a new stack, RCA's H207E This stack can only be used in an MM11-E. The H207 stack can be used in an MM11-E and MM11-F.

Title MM11-E & F/G102 MODULES		Tech Tip Number MM11 03
Processor Applicability: All	Author TOM KARPOWSKI Rev Ø Approval CHUCK DEWEY Date 6/1/72	Cross Reference

ECO G102-00005 has been written to make the G102 module capable of running in the MM11-F memory. This ECO makes this module CS revision D. It has to be at least revision D to run in an MM11-F This revision can also be used in MM11-E's. Please see that your spares are modified accordingly.

Title INTERLEAVING THE MM11-E MEMORY		Tech Tip Number MM11 04
Processor Applicability: All	Author JOHN BUZYNSKI Rev Ø Approval CHUCK DEWEY Date 6/1/72	Cross Reference

Interleaving is simply addressing the memory such that adjacent memory banks are selected on alternate cycles. Thus, it is interleavable in 8K increments or blocks. This is implemented by interchanging BUS A01L and BUS A13L inputs to the memory between the bus inputs and memory device select and control. The memory being addressed, for example, in a DATI mode is free to complete its cycle after the MSYN L- SSYN I dialog and as soon as the setup times for the bus are satisfied, MSYN L can be reasserted to

Title	INTERLEAVING THE M911-E MEMORY (Continued)	Tech Tip Number	M911 #4
All Processor Applicability	Author JOHN BUZYNSKI Rev #		Cross Reference
	Approved CHUCK DEWEY Date 6/1/72		

start a memory cycle in the adjacent memory bank while the first memory bank is completing its cycle. A significant increase in memory throughput occurs.

In the M911-E the two address bits have to be physically interchanged on the backplane. It is also necessary to modify M729 control logic module to speed up the SSYNL reset circuit. (Refer to ECO's M911-E Numbers 17, 19, and 20; M729 number 2; and ECO M1091 number 1).

Remember, when troubleshooting an interleaved memory, that successive addresses reference alternate memory banks.

Title	FIELD INSTALLATION OF M911-E ON PDP-11/45	Tech Tip Number	M911 #5
All Processor Applicability 11/45	Author ANDY VEROSTIC Rev #		Cross Reference

HARDWARE
Existing M729 control must have ECO 8M729-[illegible]3 installed for operation on 11/45.

DIAGNOSTICS
All present memory tests will run on the 11/45.

Title	FIELD INSTALLATION OF M911-F ON PDP-11/45	Tech Tip Number	M911 #6
All Processor Applicability 11/45	Author ANDY VEROSTIC Rev A		Cross Reference
	Approved ART ZINS Date 6/7/72		

HARDWARE
Existing M7290 control must have ECO's 8M7290-[illegible]2 and [illegible]3 installed for proper operation on the 11/45.

DIAGNOSTICS
All present memory tests run on the 11/45.

Title	MM11-E and F MEMORY ADDRESS SELECTION AND INTERLEAVING	Tech Tip Number	MM11-TT #7
All (Processor Applicability)	Author Chuck Dewey Rev 0 Approval Chuck Dewey Date 9/28/72	Cross Reference	

Interleaving

Interleaving for MM11-E memories is described in Tech Tip MM11 number 4. It can only be accomplished by system unit wire changes to the back plane. Refer to the ECO's, listed in the Tech Tip, for proper implementation.

MM11-F interleaving is accomplished by manipulation of jumper wires on the M1091 module. These changes are shown in Table 1. It is a normal procedure for the production line to interleave all 8K segments of MM11-F memory on the initial system prior to shipment.

Interleaving of a MM11-E with an MM11-F is not recommended primarily due to the confusion it creates when troubleshooting a system of this nature. It also creates customer misunderstanding since the average memory cycle time specification, in this situation, would not be either the MM11-E or F but somewhere in between.

	FIELD SERVICE TECHNICAL MANUAL				Option or Designator
	12 Bit ☐	16 Bit ☐	18 Bit ☐	36 Bit ☐	

Title DATA ERRORS CAUSED BY DCLO OR INIT ON MM11-K, L, M, S		Tech Tip Number 88
Processor Applicability: All	Author A Verostic/D.Dickhut Rev 0	Cross Reference
	Approval Art Zins Date [illegible]	

[illegible] problem exist with the 4K-8K PDP-11 memory (MM11-S, ME11, MM11-L) that appears to be hardware data errors, but disappears if every word in memory is accessed. The problem will appear whenever Initialize or DCLO occurs during a memory cycle. This turns off the core current drivers at the wrong time, leaving some cores in a partially switched state. These half-selected cores contribute large amounts of noise when accessing other words, causing intermittent failures.

[illegible] occurring during a memory cycle can be eliminated if the power fail trap is used properly. The power fail trap sequence should turn off any peripheral that might access memory (**individually**, not by using INIT) and halt the processor before DCLO occurs.

[illegible]ances of INIT occurring during a memory cycle will be reduced if software avoids using the RESET instruction, particularly inside tight loops. The condition of half selected cores can be cured by accessing every word in memory to assure all cores are properly switched. Once this is completed, data may be read and written normally.

PAGE OF	PAGE REVISION 0	PUBLICATION DATE [illegible]

Title	MM11-K, L, M, and S Field Problem Summary	Tech Tip Number	MM 11 TT-9
Processor Applicability: All	Author D. Dickhut	Rev	0
	Approval C. Dewey	Date	11/20/72
		Cross References	

This Tech Tip is a summary of field problems and their solutions for the MM11-K, L, M, and S memories which are found in M7411 which uses only MM11-L, 11/05 and 11/10 which use MM11-K (4K 11/05 only) and MM11-L (8K), 11/40 which uses only MM11-L (8K), and 11/45 which uses only MM11-S (8K).

1. Random Memory Locations are Altered during Power Fail

The contents may be altered while running Power Fail Diagnostic or by simply turning the machine on and off. ECO G231-5 solves this problem.

2. Memories do not have to be swapped as a system all 3 modules

A system that is shipped has a serial number stamped on side 2 of each module. This number is the same on all 3 modules and is strictly for in-house test purposes only. The memories can be and should be maintained on a module swap basis instead of a system basis (stack not tested anyway). The system serial number can be used in a case where such swapping has taken place and now the modules are to be put back in their original configuration. By matching the serial number, each system can be reunited and a lot of adjustment time can be saved.

3. What adjustments to make when a module is swapped.

When anyone of the 3 modules that make up the memory system is swapped, the strobe adjustment must be made to ensure system reliability (When the G110 module is swapped, it has the strobe pot but the setting cannot be taken for granted) The procedure to use for strobe adjustment is as follows

1. If strobe adjustment is too far off, EXAM and DEP may not work. To get strobe in the ballpark, sync on pin CU2 of the G110 model (signal READ H) and Test Point 5 of E05 pin 9 for strobe. Press EXAM rapidly and adjust strobe timing pot on G110 for a 250 ns delay from rising edge of READ H to rising edge of strobe. This should allow diagnostics to be read in.

2. Load Worst Case Noise Diagnostic (W.C.N. should be used not a Branch ...F)

3. Load Address 200 and START or Load Address 202 to select the desired bank.

4. Sync on pin CU2 of G110 (signal READ H) while scoping Test Point 5 or E05 pin 9 for strobe and margin strobe by turning pot CW until the diagnostic fails and then CCW until it fails. A complete pass of the diagnostic should be made (within reasonable limits for large core systems) at each high and low end point to ensure that is the true end point. Notice the time from the leading edge of READ H to strobe in each case. The total strobe window should be 40 ns or greater and set strobe in the middle of the high and low points. If the window isn't at least 40 ns, then the entire system should be changed because margin problems can only be dealt with back at Module Repair Depot.

This procedure is graphically illustrated and explained in the M7411, MM11-S, 11/05, and 11/40 manuals.

4. DEC memory stack threshold problem

Some DEC or RCA memory stacks (the stack identified by label on side, some may have RCA stickers) have a threshold problem and will not exhibit the normal threshold margin. In order to use these previously rejected stacks in production, the sense circuitry on the G110 was modified. In the field, if a memory stack is swapped and it is a DEC stack, the G110 module should be checked to see if R7 has been installed. If it hasn't and this is a non-Field effort G110, a G110 module with that R7 should be obtained from the Maynard Module Repair Depot. The new DEC stacks may or may not have this problem and probably will operate properly even if it does. However, with large systems or several MF8 (4MA) devices, intermittent failures may occur over a long period of time.

Title	[illegible] MEMORY KIT	Tech Tip Number	MMI [illegible]
All Processor Applicability	Author G. Cable	Rev B	Cross Reference
	Approval [illegible]. Dewey	Date 12/12/72	

The following Tech Tip will attempt to clarify the confusion regarding the ECO status for the MM11 , MM11K and MM11L memories.

[illegible]

In the near future there will be two seperate types of G110 Modules in the field. The first type of G11B Module is an Etch Revision C Module which already exists in the field. The second type of module will be an Etch Revision E.

It will not be possible to ECO the Etch Revision C Module so that it will be electrically equal to the Etch Revision E Module. For this reason it has become necessary to create two seperate sets of engineering drawings to cover the two different modules.

The engineering drawings for the Etch Revision C Module will have a circuit schematic revision of B with one numeric digit following. Each ECO released will increment the numeric digit by one (i.e. B1, B2, B3, and et .

The engineering drawings for the Etch Revision E Module will have a circuit schematic revision of E with one digit character starting at F and continuing sequentially (i.e. F, H, J, K, and [illegible].

Below is a chart that shows the revisions for the two G11C Modules

G11B Etch Revision C

[illegible] No.	Revision
[illegible] = 01	A
[illegible] = 02	B
[illegible] = 03	C A
[illegible] = 04	D A
[illegible] = 05	E
[illegible] = 06	F
[illegible] = 07	F-1
[illegible] = 08	F-2
[illegible] = 09	F-3
[illegible] = 10	F-4*
[illegible] = 012	F 5

G11B Etch Revision E

ECO No.	Revision
G11B-0[illegible]6	F
G11B-0011	H

*Note: There have been a number of Etch Rev E modules shipped that were marked Rev H and J they should have been marked Rev E3 and E4 respectively.

G231 Module

There will also be two seperate types of G231 Modules in the field in the near future For this reason it has become necessary to create two sets of engineering drawings.

The first type of G231 Module will be an Etch Revision of C. All future ECO's for this module will use a circuit schematic revision of E with a numeric digit following. Each ECO released will increment the numeric digit by one (i.e. E4, E5, E6 and etc.).

The second type of G231 Module will be an Etch Revision of E. All future ECO's for this module will use a circuit schematic revision with only an alpha character as a designator starting at CS Revision F and incrementing thru the alphabet (i.e. F, H, J, K, and etc.).

Below is a chart that shows the revisions for the two G231 Modules.

G231 Etch Revision C

ECO No.	CS Revision	Stamped on Module
G231-0001	C	C
G231-0002	N/A	N/A
G231-0003	C-1	E
G231-0005	1	E-1
G231-0006	2	E-2
G231-0007	3	3
G231-0008	3A	3A
G231-0009	E4	E4

G231 Etch Revision E

ECO No.	CS Revision
G231-0004	F

Refer to PDP 11/05 Systems Tech Tip #14 for a detailed listing and description of memory ECO's.

m3

Title	New MM11 Option Designations	Tech Tip Number	MM11-TT-11
Processor Applicability: All	Author D. Duckbut	Rev	Cross Reference
	Approval C. Dewey	Date 1/19/73	

This tech tip is to define the new variations of memories that are in existence and how they differ from the present MM11-L and S memories. The MM11-L and S are defined again for reference.

MM11-L (8K X 16, 900 ns)

It consists of a G110, G231 and H214 and is used on 11/05, 11/10, ME11-L and 11/40.

MM11-S (8K X 16, 900 ns)

This consists of a G110, G231, H214, and a system unit. It is used on 11/35, 11/40 to 11/45.

MM11-LP (8K X 18, memory parity)

This consists of a G109, G231 and H215 and is designed for memory parity. It plugs into a MF11-LP.

MF11-LP (Parity Option)

This is a memory parity option that consists of a nine slot backplane, one MM11-LP and one M7259 double height double width memory parity controller. The backplane can accomodate three MM11-LP's. This option is used on 11/35, 11/40 and 11/45.

MF11-I

This is a memory option that consists of a nine slot backplane and one MM11-I It can accomodate three MM11-L and is used on 11/35, 11/40 and 11/45.

MB11-S (8K X 16)

This is a special 8K X 16 memory with a 850 ns cycle time and consists of a G110-YA, G231, and H214-YA. This memory is used only on 11/45 and exists in very limited quantities.

G109-YA (for reference only)

Module used only on PDP15 memories.

It is important to remember that the modules mentioned in the above definitions are not interchangeable with a similar looking type in another category. For example a G109 is not interchangeable with a G110 nor is a G110 interchangeable with a G110-YA. When a memory module is replaced or swapped, it should only be replaced with the exact same module type, even though another type may appear to work.

Title: MM11-D/DP Memory Backplane	Tech Tip Number: MM11-TT-14
Processor Applicability: All	Author: William Augperlee Rev: g
	Approval: William Dimba Date: 8-5-76
	Cross Reference

The MM11-D/DP Core Memory Manual states that the G652 (mother board for the MM11-D/DP) is inserted into a "Unibus Backplane". To eliminate any confusion, the "Unibus Backplane" is the modified backplanes DD11-C, D and P used on 11/04, 11/34 systems. Other Unibus Backplanes, such as 11/05, 11/35 and DD-11B expansion backplanes are not compatible with these new memory boards.

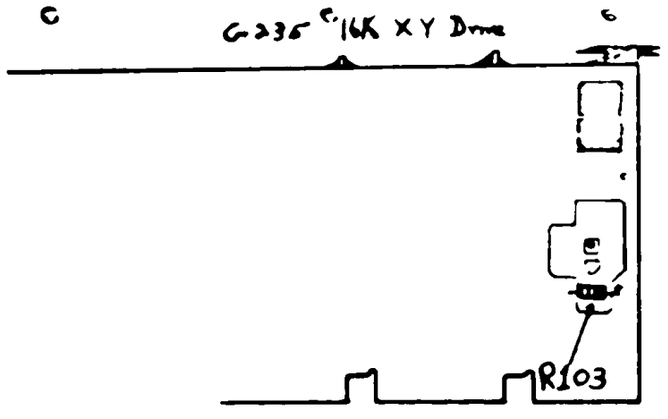
Title: MM11-U/UP MEMORIES FAILING HIGH CURRENT MARGINS	Tech Tip Number: MM11-TT-15
Processor Applicability: All	Author: Jim Holderby Rev: g
	Approval: Lee Mickle Date: 9-13-76
	Cross Reference

Many reports have been received from the field concerning memories failing high current margins and module set incompatability (i.e. unable to swap modules). Investigation has shown that the inhibit margins are not properly centered, which could cause marginal operation of the memory under conditions of high drive currents. An ECO (G235-0009) was generated to correct this problem.

Therefore, if a memory exhibits these symptoms, do a visual inspection of the G235 for the ECO. A quick check for the ECO is:

1. Place G235 component side up and fingers toward you.
2. Look at right hand side of module in large etch area (see drawing).
3. If resistor R103 (75Ω 1W) which is across bottom of large etch is not in, ECO has not been installed.

This ECO should be installed before attempting massive module swap or option swap.



Title	MM11-U/UP INSTALLATION	Tech Tip Number	MM11 TT-16
All X	Author Jim Holderby Rev 0	Approval Lee Mickle Date 12-14-76	Cross Reference

There is a problem if more than 64K of MF11-U memory is installed in the new type expansion box (BA11F) with power distribution harness 7009566. When the second H754 power supply is installed, the jumpers must be removed from the power harness. The jumpers connect P2 pin 3 to P5 pin 3 and P2 pin 14 to P5 pin 14. If these jumpers are not removed, the two(2) H754 power supplies are connected in parallel and it is possible to damage one or both regulators. The reason the jumpers are there is to allow us to install the memory backplane anywhere in the cabinet.

This information is not in the installation procedure; however, it can be found in the PDP 11/45 and 11/50 System Maintenance Manual (DEC-11-H45SM-D-D) Figure 8-5, power distribution schematic.

Title	MM11-E TROUBLE SHOOTING AID	Tech Tip Number	MM11-TT-17
Author MICHAEL BABCOCK	FS Office PITTSBURGH, PA Date 7 JUNE 77	Revision	0

FIELD RETROFIT ON MULTIPLE BOX SYS. ONLY. PHASE-IN PRODUCTION--ALL MULTIPLE BOX SYS. FOR THE MONTH OF AUG.. ALL MACHINES AS OF AUGUST 24, 1970.
ECR #100-958

PROBLEM:

TO ALLOW PROPER POWER FAIL OF MULTIPLE BOX SYSTEMS.

1. SIGNAL BUS AC LO L MUST BE CONNECTED FROM THE POWER BUS TO THE UNIBUS.
2. SIGNAL BUS DC LO L MUST BE CONNECTED FROM THE POWER BUS TO THE UNIBUS.
3. THIS ECO REQUIRES BOTH OF THE FOLLOWING: ECO #5408475-00006; ECO #M930-00001.

ALL REFERENCED CHANGES MUST BE MADE SIMULTANEOUSLY IN A GIVEN SYSTEM.

CORRECTION:

1. INSTALL WIRES.
2. CORRECT PRINTS.
3. NOTE: IF INSTALLATION OF THIS UNIT CREATES A MULTIPLE BOX SYSTEM, THIS ECO AND ECO NUMBER 5408475-00006; ECO NUMBER M930-00001 MUST BE INSTALLED. ONE SET OF CONNECTIONS BETWEEN THE POWER BUS AND UNIBUS ARE REQUIRED FOR EACH BAll WITHIN A SYSTEM.

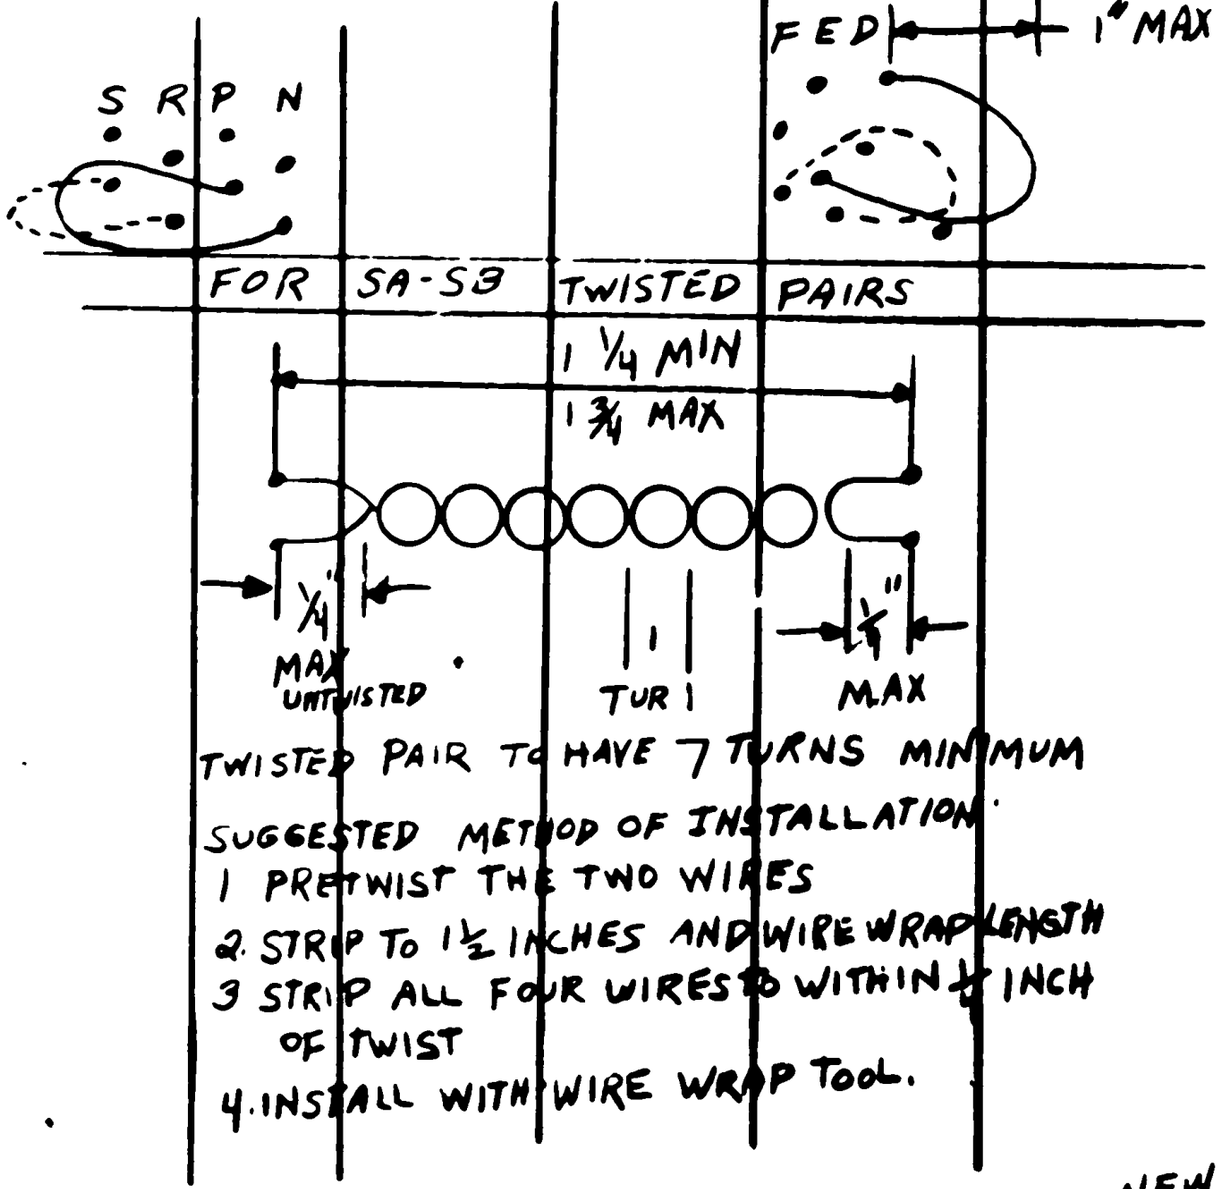
D-TD-MM11E-00

LENGTH SHOULD BE A MAXIMUM OF 2¼ INCHES. CHECK DRAWINGS FOR LENGTH AND FOR HOW LOOPS SHOULD BE DRESSED INTO LOGIC.



TWISTED PAIR TO HAVE 7 TURNS MINIMUM

SUGGESTED METHOD OF INSTALLATION:

1. PRETWIST THE TWO WIRES
2. STRIP TO 1½ INCHES AND WIRE WRAP LENGTH
3. STRIP ALL FOUR WIRES TO WITHIN ¼ INCH OF TWIST
4. INSTALL WITH WIRE WRAP TOOL.

PROBLEM

1. WANTED TO IMPROVE MEMORY PERFORMANCE. STROBE 210 NS WAS TO EARLY FOR OPTIMUM PERFORMANCE . SOME TIMES CURRENT WAS TOO HIGH FOR OPTIMUM PERFORMANCE WHEN ADJUSTING THE REFERENCE VOLTAGE
2. WIRE LIST WAS NOT CHANGED ACCORDING TO ECO # MM11E-00015.
3 BLOCK SCHEMATIC DOES NOT REFLECT CHANGES OF M729 CIRCUIT SCHEMATIC
4. TIMING AND FLOW DIAGRAM NEEDS TO BE UPDATED.
5. WRITING IN MARGIN

CORRECTION

1. CHANGED TEST PROCEDURE TO IMPROVE MEMORY PERFORMANCE.
2. CORRECT WIRE LIST ACCORDING TO SUBMITTED ADD/DELETE SHEET.
3. UPDATE BLOCK SCHEMATIC PER ATTACHED MARKED UP PRINT.
4. UPDATE TIMING AND FLOW DIAGRAM AS INDICATED .
5. REMOVE WRITING FROM MARGIN.

FIELD SERVICE NOTES:

ECO MM11E-00020
Page 3 of 3

[C] LEVEL OF URGENCY code

The ECO number will be posted to the EDP file with this LOU code replacing the lead Ø - "A"= Mandatory, High Priority
"B"= Mandatory "C"= Applicable if symptoms are present
"D"= Low Priority "D"= Product Improvement, Optional

[Yes] This ECO is NO CHARGE TO CUSTOMER - All DEC installation labor and materials are to be reported under a "W" charge code.

[No] This ECO is STANDARD APPLICABILITY - It is to be installed at no charge for warranty and maintenance contract customers in accordance with the technical effectivity, otherwise at customer expense.
Charges - Documentation $ N/C, Parts $ None*,
DEC on-site labor $ N/C. (minimum per call billing applies)
(* parts prices not available at the time of Speco release)

[F] FIELD DISTRIBUTION CODE

"F"= Immediate Speco distribution to all field offices
"DF"= No general Speco distribution, only to offices where equipment is located (less than 25 units in the field)

[No] UNCONDITIONAL ECO - General distribution kits will include Field Installation Orders, Specos, Prints, and Parts.

[Yes] CONDITIONAL ECO - General distribution will include Field Installation Orders only. Prints and parts must be ordered from FSIC as required.

[No] Parts availability delay expected _____.

[Yes] The REQUIREMENT TO MEET SPECIFICATION is applicable retroactively to equipment in the field.

  Provides 1 unit load on BUS in systems with 16K or more memory
  QUICK CHECK
  M1091 replaced M109 module
  NEW REVISION
  Rework etch B to CS A

- **G102-B0006 APR 71**
  QUICK SYNOPSIS
  Eliminates MM11-F's noise susceptibility
  QUICK CHECK
  C3 C8 C13 C18 changed from 33mmfd to 120mmfd
  NEW REVISION
  Rework etch D to CS D

- **G225-C0007 MAY 71**
  QUICK SYNOPSIS
  Prevent heat sinks from shorting to etch
  QUICK CHECK
  Insulating washers under heat sinks

- **M7290-C0002 OCT 71**
  QUICK SYNOPSIS
  Prevents Unibus hang with SSYN asserted from memory (In-plant new etch E)
  QUICK CHECK
  Wire ADD E8 pin 5 to E7 pin 9
  NEW REVISION
  Rework etch C to CS D

- **MM11E-D0022 MAR 77**
  QUICK SYNOPSIS
  Module protection plate prevents MM11 E noise interaction with adjacent modules
  QUICK CHECK
  Presence of protection plate

- **MM11E-B0024 MAY 72**
  QUICK SYNOPSIS
  Reduces noise on TINH and strobe signals
  QUICK CHECK
  Wire ADD C01F1 to D02S1/C01C2 to D02T1
  NEW REVISION
  Rework to Wire List E

MM11-E
PDP-11 MEMORY
FCO Cross Reference

A Chronological Listing of Field Retrofit FCO's Which Must Be Considered in the Field Installation and Maintenance of This Option/Module/Power Supply

• Indicates FCO Conjunction Must Be Considered With Prior FCO

☐ **M729-C0003 MAY 72**
M729-D0004
QUICK SYNOPSIS
Unibus hangs with SSYN asserted from memory
QUICK CHECK
Wire ADD E5 pin 6 to E3 pin 1
NEW REVISION
Rework etch B, C to CS C

M7290-C0003 MAY 72
QUICK SYNOPSIS
Reduced inductance of the TINH H etch corrects noise condition (In-plant new etch F)
QUICK CHECK
Wire ADD E11 pin 8 to feed thru going to AR1
NEW REVISION
Rework etch C D to CS E

PROBLEM

Under some conditions when other options are placed along side an MM11/F they fail to operate correctly.

CORRECTION

Install a module protection plate.

BREAK-IN/EFFECTIVITY

*Install module protection plate only when problems occur.

[ ] PRINT CHANGES ARE MINIMAL AND ARE TO BE MADE MANUALLY IN RED AND GREEN. FCO REVISED PRINTS WILL BE SUPPLIED ONLY UPON SPECIAL REQUEST

INSTALLATION AND TEST PROCEDURES

1. Carefully install module protection plate per FCO instructions. This requires insertion of the plate under existing wire runs which can be easily broken.
2. Run maindecs or other programs whose failure indicates the need for this FCO to be implemented. They should now function correctly.

ENGINEERING
CHANGE ORDER 4064

ORIGINATOR Richard Manion
TEL EXT 2005 DATE 5/10/72
DISC PROJ NO. 96 06122
COST CENTER NO. 392

ECO NO. MM11F-00003
SHEET 1 OF
DATE RECEIVED 5-18-72
FIRST ISSUE 5-15-72
FINAL ISSUE 5-4-72

PROBLEM

1. Strobe signals and TINH have too much noise on them.
2. Read H signal has too many loads on it.
3. Solves memory problems caused by DMA transfers that memory diagnostics don't show up, also, solves slot sensitive G103, G102 problems.

CORRECTION

1. Install twisted pairs on strobe signals, generate another TINH signal and install twisted pairs on these signals.
2. Develop another Read H signal to share the load.

BREAK-IN/EFFECTIVITY

All MM11/F's shipped after May 31 will have this ECO. Rework M7290 module when necessary, all MM11/F's with this ECO have to have M7290's with ECO #3.

FCR

MM11-F
4K 16 BIT 22 MIL MEMORY
FCO Cross Reference

A Chronological Listing of Field Retrofit FCO's Which Must Be Considered in the Field Installation and Maintenance of This Option/Module/Power Supply

• Indicates FCO Conjunction Must Be Considered With Prior FCO

1 **G102 B0002 MAR 70**
G102 B0003
QUICK SYNOPSIS
8881 IC s replaced by higher speed 74H011 IC s
QUICK CHECK
74H011 IC s in place of 8881 IC s
NEW REVISION
Exchange with CS B or later

2 **G103-C0002 MAR 70**
QUICK SYNOPSIS
Increases system speed
QUICK CHECK
7410 IC replaced by 74H10
NEW REVISION
Rework etch B C to CS B

3 **G103-C0004 APR 70**
QUICK SYNOPSIS
Provides new higher value trimpot
QUICK CHECK
R17 changed from 100 ohm to 500 ohm trimpot
NEW REVISION
Rework etch B C to CS C

4 **G102-B0004 JUN 70**
QUICK SYNOPSIS
Decreases Turn off time of the 2007 transistors
QUICK CHECK
C2 C7 C12 C17 changed from 1000mmfd to 820mmfd
NEW REVISION
Rework etch D to CS D

5 **G103-C0005 JUN 70**
QUICK SYNOPSIS
Provides increase to 6 84VDC for Sense amplifiers
QUICK CHECK
Heat sink ADD ed to Q4 C1 and C2 changed from 1000mmfd to 820mmfd
NEW REVISION
Rework etch D E to CS D

6 **G225-C0003 JUL 70**
QUICK SYNOPSIS
Speeds stabilization of X and Y current gener ator reference voltage
QUICK CHECK
R22 changed from 4 7K ohm to 2 2K ohms
NEW REVISION
Rework etch B to CS B

7 **M930-C0001 AUG 70**
QUICK SYNOPSIS
Power Fail requires BUS SP1 and BUS SP2 for AC LO and DC LO (In plant new etch B at CS A)
QUICK CHECK
R57 and R69 are 390 ohms
NEW REVISION
Exchange with etch B

• **5408475-C0006 OCT 70**
QUICK SYNOPSIS
AC LO and DC LO return high after assertion in multiple box systems
QUICK CHECK
D003 clamping diode from AC LO (anode) and from DC LO to +5V line
NEW REVISION
Rework etch A B C to CS D

8 **M729-C0002 JAN 71**
QUICK SYNOPSIS
Reduces memory cycle time on systems with 8K interleaved memory (In plant new etch C)
QUICK CHECK
Wire ADD E9 pin 2 to feed thru near E5 pin 1
NEW REVISION
Rework etch B to CS B

MM11-F
4K 16 BIT 22 MIL MEMORY
FCO Cross Reference

A Chronological Listing of Field Retrofit FCO's Which Must Be Considered in the Field Installation and Maintenance of This Option/Module/Power Supply

• Indicates FCO Conjunction Must Be Considered With Prior FCO

9 **M1091-C0001 MAR 71**
QUICK SYNOPSIS
Provides 1 unit load on BUS in systems with 16K or more memory
QUICK CHECK
M1091 replaces M109 module
NEW REVISION
Rework etch B to CS A

10 **G102-B0006 APR 71**
QUICK SYNOPSIS
Eliminates MM11 F s noise susceptibility
QUICK CHECK
C3 C8 C13 C18 changed from 33mmfd to 120mmfd
NEW REVISION
Rework etch D to CS D

11 **G225 C0007 MAY 71**
QUICK SYNOPSIS
Prevent heat sink from shorting to etch
QUICK CHECK
Insulating washers under heat sinks

12 **M7290-C0002 OCT 71**
QUICK SYNOPSIS
Prevents Unibus hang with SSYN asserted from memory (In plant new etch E)
QUICK CHECK
Wire ADD E8 pin 5 to E7 pin 9
NEW REVISION
Rework etch C to CS D

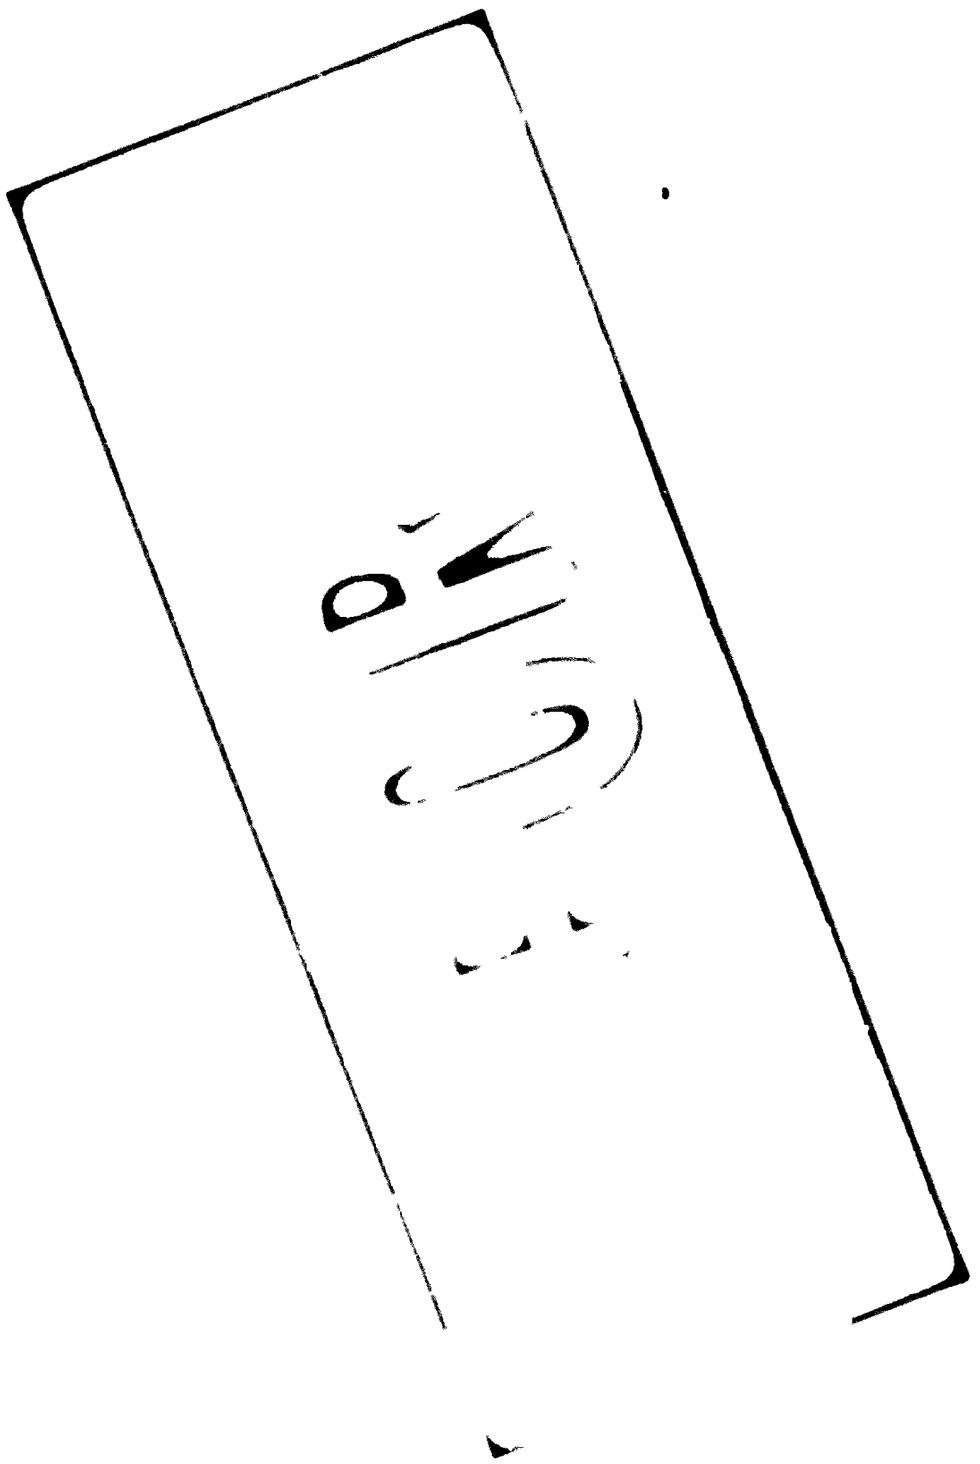
13 **MM11F-D0001 MAR 72**
QUICK SYNOPSIS
Module protection plate prevents MM11 F noise interaction with adjacent modules
QUICK CHECK
Presence of protection plate

14 **MM11F-C0003 MAY 72**
QUICK SYNOPSIS
Reduces noise on TINH and strobe signals
QUICK CHECK
C01C1 to D02E1/C01C2 to D02C2
NEW REVISION
Rework to Wire List A

15 **M729-C0003 MAY 72**
M729-D0004
QUICK SYNOPSIS
Unibus hangs with SSYN asserted from memory
QUICK CHECK
Wire ADD E5 pin 6 to E3 pin 1
NEW REVISION
Rework etch B C to CS C

16 **M7290-C0003 MAY 72**
QUICK SYNOPSIS
Reduced inductance of TINH H etch corrects noise condition (In plant new etch F)
QUICK CHECK
Wire ADD E11 pin 8 to feed thru going to AR1
NEW REVISION
Rework etch C D to CS E

MM11-L



MM11-L
8K 16 BIT 18 MIL MEMORY
FCO Cross Reference

A Chronological Listing of Field Retrofit FCO's Which Must Be Considered In the Field Installation and Maintenance of This Option/Module/Power Supply

• Indicates FCO Conjunction Must Be Considered With Prior FCO

1 G110-B0004 MAY 72
QUICK SYNOPSIS
Corrects Delay line 3 termination on etch C G110's
QUICK CHECK
R115 changed from 3 K ohms
NEW REVISION
Rework etch C to CS D
COMPATIBILITY
R115 changed from 3K ohms to 1K ohms

2 G110-B0005 MAY 72
QUICK SYNOPSIS
Corrects C152 insertion polarity (positive terminal) to +5V
QUICK CHECK
Positive terminal of C152 goes to +5V
NEW REVISION
Rework etch C D to CS E

3 G231-B0001 MAY 72
QUICK SYNOPSIS
Prevents components on G231 shorting to module above it
QUICK CHECK
Two phenolic 7/16' standoffs on module
NEW REVISION
Rework etch B to CS C

4 G231-D0003 AUG 72
QUICK SYNOPSIS
Improves 15V and strobe margins when operating at 55°C
QUICK CHECK
Sixteen D672 diodes replace 330 ohm resistors
NEW REVISION
Rework etch B to CS F

5 G231-A0005 AUG 72
QUICK SYNOPSIS
Improves DC LO and AC LO circuit operation
QUICK CHECK
Wire ADD from R89 to R93
NEW REVISION
Rework etch C to CS E1

6 MM11-S-C0003 OCT 72
QUICK SYNOPSIS
Module protection plate prevents MM11 S noise interaction with adjacent modules
QUICK CHECK
Presence of module protection plate

7 G110-C0010 NOV 72
QUICK SYNOPSIS
Data errors occur during the first DATI to any memory bank
QUICK CHECK
Wire ADD E28 pin 13 to E15 pin 10
NEW REVISION
Rework etch C D E to CS J

8 G110-D0012 DEC 72
QUICK SYNOPSIS
Provides print clarification affecting etch C G110's
NEW REVISION
CS E5

9 G110-D0013 DEC 72
QUICK SYNOPSIS
Ensures PAL and PBL data bits gate high onto the BUS
QUICK CHECK
Wire ADD's E40 pin 4 to pin 13 and E40 pin 9 to pin 12
NEW REVISION
Rework etch C to CS E6

10 G231-D0009 DEC 72
QUICK SYNOPSIS
G231 prints redrawn to DEC standards
NEW REVISION
CS E4

CU

MM11-L
8K 18 BIT MIL MEMORY
FCO Cross Reference
A Chronological Listing of Field Retrofit FCO's Which Must Be Considered in the Field Installation and Maintenance of This Option/Module/Power Supply

• Indicates FCO Conjunction Must Be Considered With Prior FCO

G109-C0004 DEC 72
QUICK SYNOPSIS
Replaces +3V with INIT L to reset STROBE one shot
QUICK CHECK
Wire ADD E28 pin 13 to E15 pin 10
NEW REVISION
Rework etch C, E to CS E3

G110-C0015 MAR 73
QUICK SYNOPSIS
Allows longer memory cycle time on systems with high speed NPR devices
QUICK CHECK
DL3 changed from 100nsec to 125nsec delay
NEW REVISION
Rework etch C to CS E7

G110-CD016
QUICK SYNOPSIS
Eliminates noise on BUS INIT etch
QUICK CHECK
Wire ADD's E4 pin 4 to E7 pin 7 AA1 feed thru to E7 pin 6
NEW REVISION
Rework etch C to CS E8

G109-C0006 MAR 73
QUICK SYNOPSIS
Lengthens memory cycle time
QUICK CHECK
DL3 replaced with 125nsec delay
NEW REVISION
Rework etch C to CS E4

G109-C0007 MAR 73
QUICK SYNOPSIS
Eliminates noise coupling onto BUS INIT etch from data line etches
QUICK CHECK
Wire ADD E4 pin 4 to E7 pin 7
NEW REVISION
Rework etch C to CS E

G110-B0018 APR 73
QUICK SYNOPSIS
Eliminates noise on STROBE 0 H etch
QUICK CHECK
Twisted pair E32 pin 6 feed thru to E58 pin 4 feed thru/E33 pin 7 to ground side of C4
NEW REVISION
Rework etch C to CS E9

G109-C0010 JUL 73
QUICK SYNOPSIS
Eliminates noise induced condition where memory randomly picks up and drops bits
QUICK CHECK
E32 pin 6 feed thru to E58 pin 14 feed thru/E33 pin 7 to ground side of C44
NEW REVISION
Rework etch C to CS E7

G110-C0019 NOV 73
QUICK SYNOPSIS
Widening R/W Reset L prevents memory skipping a restore cycle
QUICK CHECK
E26 pin 8 goes to tap 10 of Delay line
NEW REVISION
Rework etch C to CS E10

G109 C0011 NOV 73
QUICK SYNOPSIS
Lengthens R/W flip flop reset input pulse to prevent skipped memory cycles on a read
QUICK CHECK
E26 pin 8 goes to tap 10 of the Delay line
NEW REVISION
Rework etch C to CS E8

FCO Cross Reference

A Chronological Listing of Field Retrofit FCO's Which Must Be Considered in the Field Installation and Maintenance of This Option/Module/Power Supply

• Indicates FCO Conjunction Must Be Considered With Prior FCO

1 **G231-B0001 MAY 72**
QUICK SYNOPSIS
Prevents components on G231 shorting to module above it
QUICK CHECK
Two phenolic 7/16 standoffs on module
NEW REVISION
Rework etch B to CS C

2 **G231-D0003 AUG 72**
QUICK SYNOPSIS
Improves 15V and strobe margins when operating at 55° C
QUICK CHECK
Sixteen D672 diodes replace 330 ohm resistors
NEW REVISION
Rework etch B to CS F

3 **G231 A0005 AUG 72**
QUICK SYNOPSIS
Improves AC LO and DC LO circuit operation
QUICK CHECK
Wire ADD from R89 to R93
NEW REVISION
Rework etch C to CS E1

4 **G231-D0009 DEC 72**
QUICK SYNOPSIS
G231 prints redrawn to DEC standards
NEW REVISION
CS E4

5 **G109-C0006 MAR 73**
QUICK SYNOPSIS
Lengthens memory cycle time
QUICK CHECK
DL3 replaced with 125 nsec delay
NEW REVISION
Rework etch C to CS E4

6 **G109-C0007 MAR 73**
QUICK SYNOPSIS
Eliminates noise coupling onto BUS INIT etch from data line etches
QUICK CHECK
Wire ADD E4 pin 4 to E7 pin 7
NEW REVISION
Rework etch C to CS E

7 **C109-C0010 JUL 73**
QUICK SYNOPSIS
Eliminates noise induced condition where memory randomly picks up and drops bits
QUICK CHECK
Twisted pair E32 pin 6 feed thru to E58 pin 14 feed thru E33 pin 7 to ground side of C44
NEW REVISION
Rework etch C to CS E7

8 **G109-C0011 NOV 73**
QUICK SYNOPSIS
Lengthens R/W flip flop reset input pulse to prevent skipped memory cycles on a read
QUICK CHECK
E26 pin 8 goes to top of 10 of the Delay line
NEW REVISION
Rework etch C to CS E8

9 **G109-C0004 DEC 74**
QUICK SYNOPSIS
Replaces +3V with INIT L to reset STROBE one shot
QUICK CHECK
Wire ADD E28 pin 13 to E15 pin 10
NEW REVISION
Rework etch C E to CS E3

7008816	-Backplane Assembly
7008855-2B	-11/45 MM11 Power Cable (old)
7008909	-11/40 MM11 Power Cable (old)
7009562	-G772 System Unit Harness (new)
G110	-Control & Data Loops
G231	-Memory Drivers
H214	-8K Bank of Core Memory
BC11-A	-Unibus Cable
M920	-Unibus Jumper
MM11-S	-Single Backplane Unit

MM11-S ECO PARTS

NAME	ECO #	QTY	PART NUMBER	COMMENTS & DESCRIPTION
G110	# 4	1	13-00365	Resistor
	# 5	1	10-05306	Capacitor
		4	90-08213	Standoffs
	# 9	A/R	17-00024	# 10 black/white gd.wire
	#10	1	19-05547	I.C.
	#15	1	16-11327	Delay
	#18	1	10-01610	Capacitor
G231	# 1	2	90-06892	Standoffs
	# 3	16	11-05275	Diode
	#15	A/R	90-09185	Jumper wire
MM11-S	# 3	1	74-08490	Shield

MM11-S FIELD CODED ECO'S

G110	B4, B5, C9, C10 & A, D12, D13 & A, C15 & A, C16, B18, C19
G231	B1, D3, A5, D9
MM11-S	C3
